**For forty years, PAUL KAYFETZ, INC. has routinely gotten the following admitted into evidence:**

- Driverseye visibility studies
- Night-time photography
- Computer and video simulations
- Test video/photos
- Photogrammetry photo measuring

**Our computer engineers, video engineers, and engineering photography experts:**

- Apply accepted engineering measurements procedures
- Have published numerous peer-reviewed engineering papers
- Use HD video systems that produce movie theater quality
- Apply cutting edge computer techniques for lifelike photorealistic images (not computer cartoons)
- Coordinate with the best accident reconstruction and human factors experts for technical accuracy

We frequently help plan complete technical testing, visibility study, computer simulation, and demonstrative evidence strategy - coordinating a group of technical witnesses who are independently retained by counsel. This is requested by many clients because of Mr. Kayfetz' track record, his previous career as an attorney, his extensive contacts with top experts from his forty years experience as an engineering photography consultant working with the best forensic witnesses on many of the major cases during those decades, and upon his membership and participation in major engineering societies.

**Each year we help attorneys win and save hundreds of millions of dollars in verdicts and settlements.** [Letters](#)

This results primarily from our experience and expertise. It also stems from our ability to discover measurements from existing photos. [Phantom Skidmark](#). We are ahead of everyone in our field because we invest in HD cameras costing \$250,000 each, six figure computer systems, custom engineering computer programs and staff engineers - not artists.

A major part of our work is evaluating and keeping out of evidence opponents' forensic photography, computer simulations, or computer animations which do not comply with the rules of evidence. This has swung multi-million dollar results several times in recent years. [\\$62 Million Verdict](#)
